How to Clean and Maintain the White Tag Release Unit (WTRU)

- ✚ **You need:** Methylated spirits and a clean lint free cloth.
- ✚ **Why you would do this:** If your clips are getting stuck in the WTRU then you should clean it.
- ✚ Build up on both the white insert and pins affect its operation.
- ✚ Tip some methylated sprits onto the cloth.

- ✚ Hold the unit with one hand and wipe along the face of the white insert.
- ✚ Make sure you clean out the marks/grit from the **grooves** and **corners** of the white tag insert.

- ✚ Once you have done the above, push down the insert with one hand.
- ✚ While the insert is pressed down, wipe the pins removing all of the grit and build up.
- ✚ Make sure you clean the entire area of the pin thoroughly.

- ✚ Once complete, return to using the system.
- ✚ If problems persist, please give us a call and we will provide further assistance.
